JAVASCRIPT – STRINGS

In JavaScript, strings are used to represent text and are a sequence of characters enclosed in single (' '), double (" "), or backtick ( ) quotes.

1. Using Single Quotes:

```
var singlequotedstring='Hello, World!'
```

2. Using Double Quotes:

```
var doublequotedstring='Javascript is fun !'
```

3. Using Backticks:

```
var backtickstring=`This is a backtick string`
```
